SUMMARY

Recent computer science graduate with **PROJECTS** experience in Python web development and a strong foundation in data structures, algorithms, and modern web frameworks. Eager to contribute to a collaborative engineering team building production software.

EDUCATION

B.S. Computer Science - University of California, Berkeley
2022 - 2026 | GPA: 3.7 / 4.0
Relevant coursework: Data Structures, Algorithms, Operating Systems, Databases, Software Engineering, Machine Learning Foundations

EXPERIENCE SKILLS

Software Engineering Intern - Acme Cloud, Remote
June 2025 - August 2025
- Built a Python REST API endpoint using FastAPI and PostgreSQL that reduced average customer-onboarding time from 6 minutes to under 2 minutes
- Wrote 35 unit tests achieving 88% coverage on the new module using pytest
- Collaborated with 4 senior engineers in 2-week agile sprints, presenting work at sprint demos
- Triageed and fixed 12 customer-reported bugs in the billing service

Undergraduate Research Assistant - UC Berkeley NLP Lab
January 2025 - May 2025
- Implemented data preprocessing pipelines in Python and pandas for a 50,000-document text classification study
- Co-authored a poster accepted to the undergraduate research symposium

StudyBuddy
(github.com/averychen-fixture/studybuddy)
- Full-stack flashcard app built with React, TypeScript, and Express
- 200+ active users from on-campus launch; deployed to Vercel
- Implemented spaced-repetition algorithm based on the SM-2 specification

OpenWeather CLI
(github.com/averychen-fixture/openweather-cli)
- Python command-line tool wrapping the OpenWeatherMap API
- Published to PyPI; 500+ downloads in the first month

Languages: Python, TypeScript, JavaScript, SQL, Java, Go (learning)
Frameworks: FastAPI, Flask, React, Express, pytest
Tools: Git, Docker, PostgreSQL, Redis, AWS (S3, EC2), Linux
Soft skills: Clear written communication, fast learner, collaborative
